About Me

Fullstack Developer with experience in React, Angular, Node.js, .NET, and Java, specializing in scalable backends, database optimization, and API integration. Strong problem-solving skills in high-pressure environments, seeking to contribute to an innovative team.

Education

2021 - 2024:

Bachelor of Science in Computer Science - The College of Managment Academic Studies, Rishon Lezion.

Experience

Pluga

ERP system for inventory and equipment management (Client Project).

- Technologies: Angular, .NET, SQL.
- Core Functionality: Central warehouse management, unit-level warehouse management, and full lifecycle tracking of weapons and personal equipment.
- Equipment Sign-Offs: Tracking equipment assignments, returns, timestamps, and responsible users.
- User Management: Role-based access control with hierarchical permissions (Admin/Manager/ User).
- Audit & History: Full audit logs for inventory movements and user actions.
- Reporting: Structured reports across inventory, personnel, and equipment sign-offs, aligned with organizational hierarchy.
- Integrations: Telegram integration with a read-only smart agent for inventory and status queries.
- Usage: Internal system developed for a private client.

SuperEZ

An innovative web application for comparing supermarket prices and finding the most cost-effective shopping options.

- Architecture: Model-View-Controller (MVC).
- Frontend: React + TypeScript, delivering a responsive and user-friendly UI.
- Backend: Node.js, built for scalability and robustness.
- Web Scraping: Custom Python scraper using Selenium to collect real-time prices from multiple supermarkets.
- Database: MongoDB for efficient storage and management of products and user carts.

IDF Service

Combat soldier in the Nahal Brigade.

Over 300 days of active reserve duty in "Haravot Barzel".

Volunteering

Volunteered for about a year at the Hasdei Irit Association, which packs and distributes food to nee families.
